

Smart Session Prototype

New System Deployment & Setup Guide

1. Prerequisites (Softwares Required)

Project run karne se pehle naye PC par ye softwares install hona zaroori hain:

- **Python 3.10+:** python.org (Installation ke waqt "Add to PATH" zaroor check karein).
- **Node.js (LTS):** nodejs.org (Backend server ke liye).
- **Git:** git-scm.com (Code download karne ke liye).

2. Cloning the Project

1 Terminal/CMD kholein aur project folder jahan rakhna hai wahan ja kar ye command chalaen:

```
git clone https://github.com/ha5743330-ctrl/SmartSessionPrototype1.git
```

Note: Agar repo Private hai, to browser login popup aayega, usay "Authorize" kar dein.

3. Environment & Libraries Setup

2 Project folder ke andar ja kar Python environment banayein aur activate karein:

```
cd SmartSessionPrototype1
python -m venv venv
# Windows:
venv\Scripts\activate
# Mac/Linux:
source venv/bin/activate
```

3 Sab zaroori libraries install karein:

```
# Python Dependencies
pip install -r requirements.txt

# Node.js Dependencies
npm install
```

4. Manual Files (The "Missing" Pieces)

Kyunke humne heavy aur sensitive files ignore ki thin, unhein aapko manually purane PC se copy karke naye folder mein rakhna hoga:

File/Folder Name	Destination Path	Description
.env	Main Project Folder	Database URLs aur Secret Keys
models/	Main Project Folder	ML Models aur Shard files
shape_predictor_68_face_landmarks.dat	Main Project Folder	Face Landmarks model file

5. Running the Application

4 Application start karne ke liye alag alag terminals mein ye commands chalaen:

Terminal 1: Node.js Server

```
node server.js
```

Terminal 2: Python Agent/Agent Controller

```
python agent.py
```

6. Future Updates

Jab bhi code update karna ho, sirf ye command chalaen:

```
git pull origin main
```
